

Representing Tencent in Brazil

hy.cloud LATAM · ZPE Sovereign AI · Hy4 local inference for regulated sectors

Who We Are

Matheus Ximenes — corporate lawyer, founder of Beanstech.

- 12 years in the Brazilian judiciary, including **7 years as advisor to a Minister at the Superior Military Court (STM)**
- **Master's candidate in Law & New Technologies** — creator of **e-arbitragem.ai** (AI arbitration platform)
- 8 years as lawyer and investor in **real estate** — consolidating the fourth pillar of a **R\$ 80 billion market in São Paulo**
- Personal anchor: **Caucaia, Ceará** — family state, lived there since five months old. The ZPE is not a site we found on a map; **it is home**.

Thesis: AI for regulated sectors — health, law, finance, real estate. Where others ship chatbots, we ship audited decision support with legal accountability.

What Is Already Built (and running today)

Hy4-preview 780B self-hosted	Q4_K_M (467 GB) on 8× L20N, Shenzhen — running outside the Z.ai/Tencent orbit; no one else has this
GPU fleet — 22 models live	4 hosts (Alibaba Cloud, Virginia + Shenzhen): MedGemma-27B, Baichuan-M3-235B, Granite guardian chain
/decisao — decision support	8 health portals, 6-layer anti-hallucination chain (PII removal → guardian → synthesis → citation check → 235B excellence → audit trail), CFM-style legal opinion drafted
RagJur	100 million court decisions , self-hosted Elasticsearch
Token point-of-sale — live	Pix checkout, API keys, per-request billing — 97% gross margin , capacity for millions of requests/month
Portals, identity, engineering	12 production portals, Keycloak OIDC, 118+ domains, 93-repo private org, full IaC

The ZPE Play — Two Keys to LATAM

1. **hy.cloud** as Tencent's international face in the region
2. **The ZPE as the sovereign, low-latency gateway:**

Ilhéus (BA)	sites of up to 100,000,000 m² secured
Caucaia (CE)	land at any required size, in-state
Latency	68 ms to Europe (vs 560 ms today) — best path to the American coast and Europe
Energy & law	100% renewable, WUE ≤ 0.05 L/kWh, Redata Law 15.504/2026 : PIS/Cofins through 2026, IPI+II exemption for 5 years — the exact tax window to build

Demand Pipeline (regulated sectors)

Hospital Albert Einstein	active conversations
Extrajudicial liquidation	contract closing — AI to maximize and optimize Brazil's largest extrajudicial liquidation
Legal	e-arbitragem.ai + 100M-decision case law engine
Real estate	8-year practice consolidating the fourth pillar of a R\$ 80B market
Health	12 portals live, token monetization already selling

The Dominance Thesis

Hy4 with local inference, deployed on banks', hospitals', and law firms' own GPUs, will dominate regulated sectors. Regulated data does not move to the cloud — the model moves to the data. We already run the 780B flagship on our own GPUs; the same deployment pattern, installed inside the institutions, is the product no competitor can replicate: it requires the model (Tencent), the sovereign site (ZPE), and the regulatory craft (Beanstech).

The Ask

The **US\$ 350 million joint venture** proposed in your email — justified by the ZPE strategy and the asset base above. **Beanstech as Tencent's representative in Brazil**, with hy.cloud and the ZPE as the two keys to LATAM leadership.

“Yesterday, I ran Hy4 on a Blackwell, eager to meet it. The answer filled my heart. Art.”
